

# Manufacturers' selection guide

Check mark indicates the manufacturer designed that roller cover fabric specifically for coatings at top of column. Fabrics without check marks are general purpose. But all these fabrics are used for other coatings. Our customers use all of these rollers covers for working with resins and gel coats, even though the manufacturer does not specifically mention those FRP work applications. Woven fabrics are more shed resistant than the knitted fabrics. You can also download from our website, the FRP work selection guide for examples of how FRP shops use these different fabrics.

<b>Woven fabrics</b>	resins	adhesives	marine bottom paint, coal tar	epoxies-water and solvent based	floor toppings, hot solvents	water proofing, hot solvents	water proofing-top coats	roof coatings-sealers	wood preservations	stains	varnishes-satin, driveway sealers	sealers-satin, velvet, semi-gloss & gloss	primers-latex, acrylic, and oil	urethanes, latex and oil base	enamels	all paints	semi-gloss & gloss paints and enamels	all flat or satin, and eggshell paint	all flat or satin paint	latex flat paint
